Minitab Connect® 7.7

Table of Contents

1. New Features in Minitab Connect 7.7

- **Call URL**
    - Allows you to make an API request. For example, you could power down a machine, alert an internal or external group, or log additional information.
- **SAP DM Connector**
    - Create a connection between Connect and SAP DM to transfer data back and forth.

2. Maintenance Items in Minitab Connect 7.7

- **Improved performance and security**
- **Oracle Connector**
    - Add the ability to skip assisted setup and directly enter SQL for imports.
- **Pinterest Connector**
    - Supports importing of ad and ad analytical data (Ads, Ad Groups, Campaigns)
- **OneDrive Connector**
    - The connector now allows the ability to enter in multiple patterns at once by using a delimiter that defaults to a comma but can be changed by the user

3. Known Problems and Workarounds

Item 1

When using the Safari internet browser in combination with having the "Monitor User" role, your session may be logged out unexpectedly. (229698)

WORKAROUND: Use the Chrome or Edge internet browsers with this role.

Item 2

When in Preview Mode if there is one categorical slicer on the dashboard with a very high number of levels, any other categorical slicer will not be able to open the dropdown menu until a selection is made on the first slicer.

WORKAROUND: Set a preset in Edit Mode before entering Preview Mode. In this case, all options will still be present on the right-side options pane before entering Preview Mode.

Item 3

Occasionally on larger Dashboards with many Views, some of the Views may not load in correctly when opening the Dashboard or during an Auto-Update. New Assets cannot be created using those Views and any Assets associated with them cannot be edited.

WORKAROUND: Open the View in Connect and re-save it (No changes are needed). After that either close and reopen the Dashboard or enable Auto-Update.

4. Problems Resolved in Minitab Connect 7.7

The following issues are resolved in Minitab Connect 7.7.

- Homepage icons can be dragged as file import (185054)
- Save External > Copy view: cannot add Multi-Column Indexes to new table (186265)
- Better handling of Null values in Visualize tool for categorical charts (186650)
- Better handling MongoDB Connector issue (186792)
- Flow cannot be triggered by Form submission via File Import/Paste Text (197081)
- Name and type fields should be required for creating a new Alarm (213847)
- Refreshing flow twice duplicates it and replaces last flow with the duplicate (219090)
- MWX file export should not support Display/Value pair for a dropdown field (225545)
- User should be appropriately warned when truncating data in Prep tool (225557)
- Better handling file export with filename contains certain characters (225716)
- Scatterplots treat numeric dimension values as a text field (231464)
- Better handling of Alarms message (232320)
- Alarm parameter has multiple backslashes after multiple saves (232984)
- Better handling of Developer role's access to Alarms (233042)
- Better handling of Tables with Alarms for data updates (233417)
- Saving Alarm multiple times creates multiple Alarms (233475)
- MongoDB Connector: could not save an export with 'Collection' name (235223)
- Improved handling of long column names (227548)
- Date Range Slicer: custom date range incorrectly switches to relative date option if custom date range matches predefined range (229530)
- Slicer filters all data when auto-update in focus mode (229705)

- User inputs in Alert Options dialog could be reverted if auto-update is on and slicer is present (232253)
- Time Series Plots are no longer limiting navigator to first 5k points (235065)
- Dashboard Save button grays out and increased slowness (186915)
- Dashboards no longer contain reference to data views upon opening (186904)
- Data Views no longer connected (186795)
